

Measure in Inches

Cabinets and Appliances are measured in inches, so your drawings should be recorded in inches. Not feet and inches.

Example: 138-1/8in, not 11-ft 6-1/8in

Appliances, Walls and Openings

When measuring for ceilings, walls, appliances and openings, round to the nearest 1/8in.

Example: 36-1/8in, not 35-1/16in.

Recording Your Measurements

We've provided graph paper (located on the back of this page) to help with your drawing. It is much more important to record accurate dimensions than drawing your room to scale. Be sure to write the actual dimensions on your drawings for all the elements in your space. If this is a new build, please ensure all sheetrock is in place.

Budget \$ _____

Don't Forget These Items

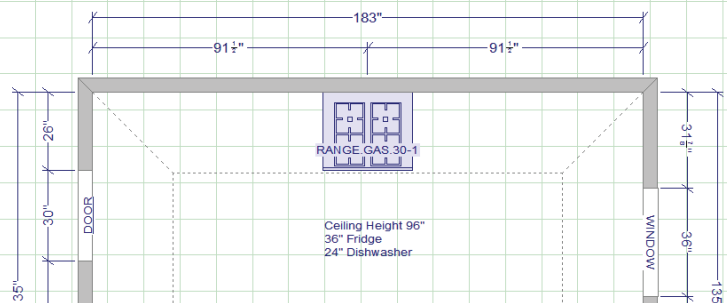

- Ceiling Height(s)
- Walls - Sheetrock to Sheetrock
- Fridge & Model Number
- Appliance Locations - Keeping existing appliances?
- Doors, Openings & Windows
- Island Cabinets - Length & Width
- Locations of all Plumbing, Gas and Electrical Outlets

Kitchen Upgrades

- Rollout Trays
- Trash Cans
- Drawers
- Spice Rack
- Wine Rack

SAMPLE DRAWING:

Here is an example of what **your** kitchen drawing should look like. Notice the inclusion of each wall's width, door & window widths, ceiling height, and appliance location and width.

Disclaimer: The price given based on the above measurements is only an estimate. The **final quote** will be given once measurements are made **on-site** by the KB STUDIOS Team.
